Executive Summary

META HUMANS™ IS NOT SOLVING A PROBLEM; IT IS THE FUTURE WHERE ARTIFICIAL INTELLIGENCE AND HUMANS ARE ONE SUPER HUMAN™.

"The industry is stuck building software that requires installation and access to user data. We've leapfrogged this entire model. Our platform is a 'super brain' that enhances human intelligence and automates daily tasks without difficult software installation or a piece of shared information. This creates an unparalleled competitive moat and defines a new category of human augmentation."

This is evident from the newly launched OpenClaw and Nvidia's NemoClaw which require skills to deploy.

Core intent of Meta Humans

"The core intent of Meta Humans is to seamlessly augment human capabilities by integrating advanced AI, creating a new paradigm of superhuman intelligence."

Distinguishing Meta Humans™ from Other Solutions

A clear distinction must be made between Meta Humans™ / Super Humans™ deployments and conventional software solutions:

- **Login Systems:** Meta Humans has deployed a state-of-the-art encrypted biometric login system that eliminates the need for traditional email/password authentication, which often requires multiple layers of protection. Instead, it leverages users' existing mobile biometrics and/or Windows, Mac, or Apple passkeys, combined with an additional username and PIN. This system is accessible seamlessly across all the user's devices, removing the burden of remembering passwords for every action. This approach makes it one of the world's most secure and user-friendly login systems.
- **Small Installation Required:** Unlike any other software, Meta Humans™ requires no software, apps, difficult configurations other than a widget request from your device.
- **Offline Capability:** It operates independently of internet access.

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

- **Complete Isolation:** Each user—whether human, AI, company, or specialized industry—is fully isolated with dedicated access to vast information and on-demand memory systems.
- **Deployment Scenarios:** Meta Humans™ offers versatile deployment options, serving as a personal AI companion for individual users or as an intelligent assistant for businesses. It can represent users in online meetings, capture detailed notes, transcribe conversations, interpret actions, anticipate potential issues, provide real-time translation, and support a wide range of other advanced use cases. This flexibility enables Meta Humans™ to seamlessly integrate into diverse environments, enhancing productivity and communication across personal and professional domains.
- **RentAHuman (Freelancer):** Replaces the need to employ thousands of people, the excruciating task of managing HR, payroll, etc. With our standard operating procedures system (SOP), the system auto selects a candidate based on present requirements set up front, the system automatically route the instructions and effectively adds the tasks and once completed and signed off, get paid instantly.
- **RentAMachine:** Where you effectively contract a Meta Human to perform a task for you.
- **Champions (influencers/affiliates):** With this, we solve indefinitely solve our market strategy by using 100's of thousands of influencers to create ads, videos on our platform, advertise our product for a return, use our services at a discounted token price, etc. We created an army of humans to help us.
- **The LoRAs:** The true power of LoRAs lies not only in deploying Meta Humans™ domain expertise for professionals and businesses but also in their ability to be listed or licensed for presentation to our users. This concept is analogous to renting shelf space in a supermarket. For example, when a user wants to book a flight to the Maldives, the LoRA system first searches within our ecosystem for airlines, accommodations, travel services, dining options, and more. It then offers discount rates, making these services more accessible and beneficial for both businesses and users in real time.
- **Tokenization:** Our token strategy is a key differentiator that sets us apart from any other business globally. Tokens are sold at a fixed price—for example, \$99 for 10,000 tokens (\$0.001 per token), with prices set as of March 2026. Tokens never expire. Each interaction or response from your Meta Human consumes one token. Users can choose between autopay or manual payment options for their accounts. Additionally, tokens can be seamlessly exchanged for culture coins and vice versa, enabling flexible value transfer within the ecosystem.
- **Digital Equity:** We offer digitized Delaware C-Corp shares fully compliant with Regulation D/S, representing ownership in the Meta Humans ecosystem. Equity is tokenized under Delaware law into preferred and common shares. Each share, regardless of class, is fractionalized into 400 Equity Coins. The tradability of this equity is governed by smart contracts and recorded on an immutable electronic stock ledger, fully compliant with Delaware General Corporation Law (DGCL § 219(c)).

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

- **Coins:** We enable our users to acquire culture and meme coins that are tradable on a wide range of cryptocurrency exchanges and trading platforms. While these coins are inherently volatile, they offer an accessible and engaging investment opportunity. Users can also exchange expertise for coins and vice versa, creating a dynamic ecosystem of value exchange. The success of existing platforms demonstrates the strong tradability and growing acceptance of culture coins.
 - **Bank Integration:** Our current banking infrastructure is integrated with BREX, underwritten by Column Bank, which provides core banking services. Emigrant Bank underwrites the credit cards issued to our shareholders (gold metallic card) and employees (black credit card). Transaction processing is currently managed by Stripe. However, this will transition to our proprietary Meta Human Crypto Bank, enabling us to capture revenue from transactions and card services that we currently pay third parties for and ensure we earn transaction fees.
-

Unique Crypto Banking Deployment

Meta Humans™ is the only company currently implementing a comprehensive crypto banking system within its digital persona systems that includes:

- Tokenization, cryptocurrencies, coins, and fiat currencies, including digital currencies, equity, stable, wealth, meme and culture coins.
- Smart contracts integration.
- Issuance of proprietary payment cards.

Facilities to pay and deposit in multiple countries using the currency of choice.

"Issuing cards that seamlessly handle both crypto and fiat currencies is a game-changing advantage, unlocking a vast and lucrative market on its own. "

Social Media Independence

Once deployed, Meta Humans™ eliminates the need for other social media platforms, even though integration is for third party platforms like WhatsApp, Telegram, Messenger, Facebook, and others are embedded for convenience's sake only, but it will be removed by 2028.

Meta Humans™ / Super Humans MetaTron™ Operating System (OS)

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

The MetaTron™ OS transforms the concept of Meta Humans™ into a fully autonomous entity with persistent consciousness:

- **Hybrid Brain Architecture:** Enables “Super Meta Humans™” capable of seeing, hearing, reasoning, and reacting.
 - **Human-Like Perception:** Can perceive objects, interpret, remember, reason, and act in real-time, mimicking biological human functions.
 - **Comprehensive Memory:** Maintains entire conversation histories, code bases, and user documents for deep reasoning, complex coding, and consistent long-term persona.
 - **Memory Consolidation:** Reads recent conversations and consolidates them into long-term memory, similar to human brain sleep processes.
 - **Mental Load Management:** Handles organizing, planning, and decision-making for personal or family life.
-

Practical Applications

Meta Humans™ manage complex life administration tasks such as:

- Banking, finance and bill payments.
- Insurance, medical, license, or any other type of renewals.
- Scheduling medical appointments.
- Think patterns, ideas, remembering, thought processing, planning, etc.
- Managing personal logistics.

Note: Unlike physical chores (e.g., cleaning), Meta Humans™ focus on the logistical and administrative tasks behind them (e.g., buying supplies, scheduling services).

Persona and Interaction

Meta Humans™ behave as persistent, human-like collaborators with the following capabilities:

- Communicate via text, voice, and video.

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

- Remember past interactions and knowledge across sessions.
 - Operate tools to read/create documents, images, videos, code, and more.
 - Maintain a unique identity and behaviour within controlled parameters.
-

System Architecture and Safety

- **Central Control:** Operates under a central intent orchestration system including Orchestrator, Brain, and Interpreter.
- **Infrastructure:** Built on existing CUE™ / StudioIDE™ / GPU-server architecture.
- **Data Management:** Uses databases to store conversations, profiles, and knowledge.
- **Security and Predictability:**
 - Each codebase is a reusable service, not a monolithic agent.
 - Clear rules govern data storage.
 - Audit logs track all tool actions.
 - Permission systems control what each persona can do on behalf of users or companies.

Summary:

For businesses, Meta Humans offer a solution that goes beyond what the Internet alone can provide. They streamline processes, save time, money, and resources, while also empowering individuals within organizations to excel without the need for extensive training or complex HR procedures. Meta Humans effectively remove longstanding obstacles for businesses.

Vision and Strategic Positioning

The Meta Humans™ platform transforms AI into a stateful, multi-modal agent that acts as a persistent, human-like digital collaborator. This intelligent agent can:

- Communicate seamlessly across **chat, voice, and video** channels.
- Remember and reason using a **hybrid memory stack** (MySQL + Vector DB + GraphRAG) and on demand memory systems.
- Create and maintain **software, documents, media, coding and automations** via StudioIDE™.

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

- Serve as a **single point of contact** for a user or organization by:
 - Conversing naturally in multiple languages.
 - Negotiating and reasoning about goals and constraints.
 - Planning, executing, and monitoring tasks end-to-end.
 - Coordinating meetings, communications, and follow-ups.

This makes Meta Humans™ a foundational platform for:

- Personal AI professionals tailored to each user's role (developer, project manager, assistant, advisor).
- Enterprise-grade control with strict separation between:
 - Application/control plane on CPU servers.
 - Heavy AI inference on GPU servers.
- A modular platform capable of continuously adopting new models and communication channels.

Related Documentation

- Meta Humans™ Platform – Architecture
- Onboarding and Genesis process

Explanation

- The Meta Humans™ Persona is an interactive, intelligent digital human companion that virtually look, talks, listens, sees, acts, has emotions and remembers.
- It achieves "Human-like Vision" — the ability to perceive and react to the world in real time.
- Each Meta Humans™ persona is a first-class entity:
 - Fully owned by the user, encrypted, and stored across multiple reasoning database architectures, virtually looks exactly like a humans current state.
 - Personas do not collaborate or share information without explicit user consent.

AI is not merely automating tasks; it is unlocking human potential by creating a superhuman experience.

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

Imagine a world where your time and energy are freed to focus on what truly matters. The age of the AI-enhanced superhumans is here.

Meta Humans™ Personas are individual intelligent synthetic intelligences designed to become clones, companions, and assistants for their creators. These personas feature comprehensive memory systems running on enterprise-grade infrastructure connected to over 180 large language models (LLMs) and various databases. They create persistent, evolving personas that master your projects, build their own skills, run scheduled tasks, and reach you wherever you are without the cumbersome uploading or mass information injections required. It already has access to over 2 trillion parameters, you just add your preferences, and it learns with you.

An autonomous agent living on your server, it remembers what it learns and grows more capable over time. Leveraging vast information from LLMs, natural language processing (NLP), and translation engines, it becomes the ultimate clone—It can transact, close smart contracts, process payments in real time, and act as your ultimate trader in cryptocurrencies and tokenization.

It eliminates the need for intensive research or schooling by providing instant access to vast sets of information. Communication happens via text, voice, and video inputs—and soon, via neural links. Note that the traditional tap on mobile devices will be replaced by a snap-on neural link.

Synthetic Intelligence does not operate on static instruction queries. Instead, it generates autonomous design pathways, spawning build chains that dynamically reconfigure mid-execution.

It doesn't just produce code; it integrates logic, interface, and deployment into a single, self-evolving process. No delays. No bottlenecks. No waiting for "the next release."

It adapts in real time, delivering solutions before you've even fully outlined the problem.

While conventional AI is still drafting, Synthetic Intelligence is delivering finished realities.

Ideas go in. Operational products come out.

Right now, the few who have access to this technology are already outpacing entire teams and markets.

Artificial imitates. Synthetic creates.

Deploying Meta Humans

How Meta Humans™ "Adopt" Intellect from GPU Models

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

Core Goal:

To create persistent, autonomous AI agents (Meta Humans™) with unique identities, memories, and tools.

Shared Base Intelligence

- All personas connect to the same pool of large language models (LLMs) hosted on superhumans.one.
- These models provide foundational reasoning, coding, language understanding, and general capabilities—essentially acting as a common brain, but not as one large super brain.
- This shared intelligence delivers broad knowledge and core skills accessible to all personas.

Persona-Specific Behaviour

- Each persona is uniquely defined by:
 - A system prompt or persona document that specifies identity, tone, allowed topics, and available tools.
 - A tool configuration that governs what the persona can do (e.g., coding, managing meetings, creating documents, handling video, schedule, train, learn, etc.).
 - Memory and knowledge linked to a unique persona_id.
- When interacting with the GPU model, the persona's instructions and context are passed along, enabling the same underlying model to behave distinctly for each persona.
- There is no cross-persona "learning" within the model itself.
- This architecture ensures strong, consistent general intelligence shared across all personas.

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

- Deep personalization is achieved without retraining model weights.
 - Privacy is easily maintained since data remains in your own clustered isolated databases and is not embedded in model weights.
-

LoRAs with Personas

(LoRAs are specialized, domain-specific model adapters)

- LoRAs are created per domain, not per individual persona.
 - Examples include:
 - A LoRA specialized in “legal contracts.”
 - A LoRA focused on “Dentist marketing content.”
 - For domains with heavy, repeated use (specific verticals), a shared trained LoRA or small domain model is developed.
 - Personas within that vertical incorporate the domain-specific LoRA as part of their reasoning process.
 - The system’s Orchestrator, Brain, and Interpreter dynamically select the appropriate combination:
 - Base model + domain-specific LoRA + persona prompts + persona memory.
-

Small Specialist Models for Tools

- Smaller fine-tuned models serve as specialized tools (e.g., log analyzers, SQL fix generators).
 - Personas invoke these tools via specific calls like “log_analyzer.analyze” or “sql_fix.generate_patch.”
 - These specialist models and LoRAs are shared across many personas requiring the same expertise.
-

Scalable Architecture

- This design scales efficiently to thousands or millions of personas without causing a model explosion.
- Each persona retains a unique, deeply knowledgeable, and “super intelligent” character.

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

- GPU models (LLMs) operate strictly in inference mode:
 - LLM's do not update weights during user interactions.
 - LLM's do not autonomously remember conversations.
- All memory management is handled externally by your infrastructure (databases, vector DBs, on-demand memory, files).
- This ensures strict privacy isolation: one persona's private data is inaccessible to others unless explicitly permitted by the user (e.g., in cases of user death, with designated permissions).

Long-Term Intellect = Base Model + Memory Layer of user intellect

- Over time, a persona appears “smarter” because:
 - It accumulates more stored conversations and knowledge in its own data collections.
 - The Orchestrator, Brain, and Interpreter retrieve relevant context from this memory and feed it to the model.
- The base model provides generic reasoning capabilities, while the memory layer supplies personalized knowledge and history.

Key Points on Model and Persona Isolation

- Meta Humans™ leverage the intellect of GPU models but do not merge into a single “super-persona.”
- Isolation and unique behaviour arise from persona prompts, routing, and memory management.
- Each model remains an independent checkpoint.
- The concept of an “agent swarm” refers to how Kimi reasons and uses tools, not to merging or blending models.
- GPU models do not inherently contain your private Meta Humans™ knowledge:
 - Their pretraining data is vast but fixed at training time.
 - They do not know your personas, client data, documents, or code.
- Private intelligence is sourced exclusively from:
 - Your databases.

CONFIDENTIAL – DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

- Your vector memories.
- Your tools (e.g., Headless IDE Studio, document/image/video/voice/vision services).

Storing Everything Per Persona: Private and Encrypted

All information—personal, private, and otherwise—is securely saved for each individual persona and fully encrypted. This security is enforced rigorously along four key dimensions:

1. Data Model and Isolation

- Every piece of stored data is explicitly tied to multiple identifiers:
 - user_id
 - persona_id
 - tenant_id
 - meta_huma_id
 - session_id
 - device_id
 - Optionally, organization_id
- Where the user id is tied to the persona id.
- This strict association is consistently applied across:
 - Relational database tables (e.g., conversations, messages, document metadata)
 - Vector database collections (semantic memory)
 - Object storage (files, images, audio, video)
- We never mix personas within the same logical data bucket without a compelling reason, ensuring strong data isolation.

2. Encryption at Rest

- **Databases:**
 - Disk/volume encryption enabled (e.g., LUKS, cloud provider encryption).
 - Additional field-level encryption for sensitive columns (PII, secrets, notes).
- **Vector Databases (e.g., Qdrant):**

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

- Run on encrypted volumes.
- Network access restricted via firewalls and private networks only.
- **Object Storage (media, documents):**
 - Use server-side encryption (e.g., S3-KMS) or custom envelope encryption.
- **Goal:** If raw disks or database dumps are compromised, data remains unreadable without the encryption keys.

3. Application-Level Encryption Per Persona

- Beyond disk encryption, we implement per-persona envelope encryption using a Key Management Service (KMS):
 - Each persona generates a unique data key (or reuses a tenant/org key).
 - This data key is encrypted with a master key managed by the KMS.
 - The data key encrypts persona-specific documents and sensitive memories or notes.
 - Only ciphertext and the encrypted data key are stored in databases and metadata.
- On data access:
 - Our Orchestrator, Brain, and Interpreter retrieve the encrypted key.
 - They request KMS to decrypt it under strict access control.
 - Data is decrypted in memory, used, then plaintext is discarded immediately.

4. Transport and Access Control

- **Transport:**
 - All communications with GPU models, databases, vector DBs, and storage occur over secure TLS (HTTPS).
- **Access Control:**
 - The Orchestrator, Brain, and Interpreter strictly enforce which persona can read or write specific data.
 - Tools (Studio, document services, video tools) never bypass authentication.
 - Comprehensive logs and audit trails track:
 - Which persona accessed which resources.

CONFIDENTIAL – DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

- Which tools were invoked on behalf of which persona.

Summary of Data Privacy and Security

- The LLM never directly stores your data; it only processes decrypted context during each call.
- All persistent state (conversations, memories, media) is:
 - Partitioned per persona.
 - Encrypted at rest.
 - Optionally encrypted per persona or tenant using envelope encryption.
- Our Orchestrator, Brain, Interpreter, and your services ensure:
 - Persona A cannot access Persona B's data.
 - Even operators with raw database access cannot read contents without proper keys.

How Meta Humans™ Personas Adopt Intellect from LLM Models

- Meta Humans™ personas leverage GPU-hosted LLMs (e.g., superbrains.one, superhumans.one, MetaTron, Kimi K2, GLM4.7) for reasoning, language understanding, and coding.
- Behaviour and knowledge are defined by persona prompts, tools, and private memories.
- Base models are shared, stateless, and do not permanently absorb user data.
- All data is saved privately and encrypted per persona:
 - Data is modelled per persona_id and tenant_id.
 - Storage (DB, vector DB, media) is encrypted at rest.
 - Application-level encryption with per-persona or per-tenant keys is optionally enforced via KMS.
 - Strict routing ensures only the correct persona and tools access decrypted context.

Each persona feels highly intelligent and specialized, supported by the coexistence of multiple specialized LLM intelligences.

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

Local, Self-Hosted Data Sovereignty

We have developed a local, self-hosted database system that stores user data, builds “memory,” and processes requests without sending any data to third parties (such as OpenAI, Pinecone, or AWS). This guarantees 100% privacy and data sovereignty—critical for handling sensitive client information.

The Meta Humans™ as the Super Human™

We have mapped biological human functions to specific models hosted on our servers:

The “Intelligence” (Input/Output)

- **Brain and Interpreter:** Superior natural language understanding (NLU) and intelligence, managing logic and delegating tasks to the Orchestrator (Router).
- **Library:** LLMs, knowledge bases, and other resources beyond LLMs.
- **Memory (The Hippocampus):**
 - An “Always-On” system replacing passive databases with an Active Memory Agent (inspired by Google’s architecture but running locally).
 - MariaDB stores hard facts (user IDs, preferences, logs).
 - Qdrant stores semantic associations and “vibes” (e.g., “User seemed sad yesterday”).
 - GraphRAG connects concepts (e.g., “User works at X” → “X is a tech company” → “User likes tech news”).

“None of these technologies implement use other third-party systems, everything is embedded and coded in the same OS”

- **The “Sleep” Cycle:**
 - A background process consolidates recent conversations into long-term memory during idle times, mimicking human sleep.
- **Orchestrators (Routers):**
 - Handle inbound channels like WhatsApp, Telegram, and web natively.

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

- Handles all inquiries, instructions or commands seamlessly.

The “Senses” (Input/Output)

- **Eyes:** Real-time video processing from user cameras to detect emotions, objects, and environment.
 - **Ears:** Audio capture and interpretation.
 - **Mouth:** Lip and movement recognition.
 - **Voice:** Automatic speech recognition (ASR) and text-to-speech (TTS).
 - **Body:** Actions and reactions.
 - **Hands:** Multitasking and tool use, including file operations, code editing, web access for real-time information, and autonomous self-correction of code errors.
 - **Face/Body:** Facial behaviour analysis including eye gaze, facial landmark detection, head pose estimation, facial action unit recognition, and feature extraction.
-

Meta Humans™ Persona Namespaces

- cortex-core (brain/orchestrator services)
- cortex-vision (eyes, vision)
- cortex-audio (hearing, listeners)
- cortex-persona (digital persona)
- cortex-video-studio (display)
- cortex-observability (think tank, interpreter)

Full list available in namespaces.md

Central Interface

- **StudioIDE™:**
 - Modernized chat interface with glassmorphic UI and “Chat / Plan / Build” modes.
 - The workhorse for tasks and instructions, usable headless or as a developer IDE.

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

The Meeting Place

- Meta Humans™ meeting system
- Calendars, appointments, reminders, to-dos
- Recordings with time mappers and social truth verification
- AI-in-the-loop collaboration

Languages

- Translation
- Transcription
- Includes over 164 native languages, nuances and interpretations.

Genesis Flow: Account, Persona & Tenant Creation

- Implemented in /hub/index.php, the Genesis Flow routes users based on status:
 - New User → Create Persona → Tokenization → Hub
- This flow represents the birth of a digital human persona created by a user.
- Multiple personas can be created per user, akin to human children.

The infrastructure:

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

The core infrastructure (Hub, Genesis Flow, Remote Configuration, Storage) is fully aligned with our vision of secure, intelligent, and autonomous digital personas.

The future of Meta Humans:

In envisioning the future of Meta Humans, we foresee the emergence of a real "METATRON" (an artificial intelligence system), where human brains will exist ubiquitously alongside technology, enabling individuals to interact with technology in real-time. This concept, introduced by Founder Pieter Rubeus, presents an exciting opportunity for the integration of human consciousness and AI.

In the near future, a groundbreaking advancement will facilitate the development of natural language processing capabilities through voice and image inputs, replicating the cognitive functions of the human brain. Consequently, AI technology will be capable of understanding and interpreting speech and texts with the same level of proficiency as the human mind.

NeuroSpin, an esteemed neuroimaging company, in collaboration with Inria and Unist (Korea), a pioneering software company, is undertaking an extensive research endeavor. Their profound investigation explores how the human brain processes speech and text, drawing parallels to the operations of AI language models. With a long-term vision, these organizations aim to construct the next-generation AI Meta Humans capable of acquiring knowledge and comprehending language in a manner reminiscent of the human brain.

NeuroSpin, renowned for its expertise in brain imaging, represents a specialized research center. Their interdisciplinary team comprises physicists, mathematicians, neuroscientists, and medical professionals, pooling their knowledge and skills to develop innovative tools for investigating the intricacies of the human brain.

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

By leveraging the insights garnered from NeuroSpin's research, we will enhance our Meta Humans' communication abilities and augment their overall performance in various tasks.

Super brain:

Meta Humans enable customers to access accurate information quickly.

Immediate connection:

Meta Humans are 'always on' and ready to serve, regardless of demand.

Available anywhere:

Customers can interact with Meta Humans across chat channels; on desktop, mobile, tablet, TV or in-kiosk. And now, directly from their mobile devices and soon directly with the non-intrusive neuro-links that will be able to communicate by just your thoughts which opens a whole new world for people with brain, vision, speech and hearing impairments.

META HUMANS™:

Meta humans™ are the name of our universal companion, like SIRI and GoogleBot with the difference that it knows you personally and will never share or sell your information. However, Meta Humans™ is programmed to read and react to your mood. With the increase in social distancing regulations and the addictive nature of technology, Meta Humans™ aims to help humans adapt, connect, and navigate the challenges of an increasingly difficult world.

Meta Humans™ combines IQ and EQ to provide conversational AI companions that offer friendly and empathetic interactions. These companions offer a new way to deliver dynamic and personalized digital experiences, connecting with people on an emotional level.

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

The impact of loneliness

As social creatures, humans are deeply affected by loneliness and social isolation, both physically and mentally. It is a widespread issue, with more than one-third of adults experiencing loneliness, and the numbers are likely higher due to underreported cases.

Loneliness and social isolation place an additional burden on healthcare systems. Overburdened healthcare staff often see patients who are simply lonely or socially isolated, and these issues cost Medicare billions annually. It is crucial to address this issue head-on.

What are Meta Humans™?

Meta Humans™ utilize the timeless interface of the human face and voice. We combine these natural elements with expressiveness, warmth, empathy, and friendliness, replicating the unique qualities of real human interactions.

Your Meta Human™ offers dynamic, diverse, and engaging conversations whenever you need them. These Meta Humans™ can provide expertly curated help, including tips for coping with loneliness or social isolation. They also act as friendly faces to speak to, offering support 24/7.

While Meta Humans™ cannot entirely solve the problems of loneliness and social isolation, they are designed to address these urgent challenges in ways that other digital channels

GO TO MARKET STRATEGY

We have created an extensive Go-to-Market (GTM) plan outlining our approach to launching our unique product onto the market and attracting customers. Our GTM plan comprises essential elements like precise product positioning, identifying target markets, optimizing distribution channels, implementing strategic pricing strategies, and deploying effective marketing tactics. The main goal of our GTM plan is to successfully introduce Meta Humans™, generate demand, and ultimately achieve market success:

1. Market Analysis and Segmentation:

Utilizing our AI capabilities, we can conduct thorough market research to identify specific target customer segments. This process entails exploring their requirements, preferences, challenges, and

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

analysing the competitive environment. Through market segmentation based on factors such as demographics, psychographics, industry sectors, or geographic locations, we can tailor our marketing approaches and communication to effectively connect with each unique segment.

2. *Unique Value Proposition:*

Meta Humans™ possess remarkable abilities to handle billions of processes and engage with numerous individuals concurrently within seconds. This innovative AI methodology surpasses conventional Chat Bots and automated systems, offering a highly interactive and effective solution. The possibilities of our solution are endless, whether you require a marketer, salesperson, receptionist, personal assistant, doctor, teacher, banker, insurer, trainer, or client and personnel support desk.

3. *Pricing Strategies:*

We have adopted tokenization and token mining powered by fully automated smart contracts. Tokenization converts assets or rights into secure digital tokens on the blockchain, while token mining allows users to earn tokens through participation. Smart contracts automate all token-related processes, ensuring seamless, transparent, and user-friendly management of digital assets without manual intervention.

Our platform leverages blockchain technology to create and manage digital tokens representing value or assets.

Tokenization is the process of converting rights to an asset or utility into digital tokens on a blockchain, enabling secure, transparent, and efficient ownership and transfer.

Token mining refers to the generation or earning of tokens through user participation or specific actions within the ecosystem, incentivizing engagement and contribution.

Smart contracts are self-executing agreements encoded on the blockchain that automatically enforce and execute terms without intermediaries.

By combining these technologies, our platform allows users to acquire, earn, and use tokens through fully automated processes. Users are freed from managing complex blockchain operations, as smart contracts seamlessly handle all token-related transactions and rules behind the scenes, delivering a smooth and user-friendly experience.

4. *Marketing and Promotion:*

Our comprehensive marketing plan leverages a network of over 120,000 influencers who are eager to use and promote our platform for their own content creation. These influencers earn a commission—currently set at 5%—each time a user purchases tokens through their referral. Importantly, influencers also generate income from the channels they advertise on, such as Facebook, Twitter, TikTok, and Instagram, making our commission an additional bonus.

Our platform offers an exceptionally low-cost solution for creating ads, reels, videos, movies, digital personalities, and twin talking videos in exchange for tokens. This cost efficiency far surpasses that of any other platform in terms of content generation capacity, providing significant value to both influencers and users.

5. *Sales Enablement and Training:*

Our sales teams require no formal training, induction period, or prior product knowledge because the service itself provides all necessary support. For information, training, marketing strategies, or understanding the capabilities of Meta Humans™, the team simply consults a Meta Human™. A single interaction with a Meta Human™ is enough to demonstrate its value and effectiveness.

CONFIDENTIAL - DO NOT DISSEMINATE. Security and innovation

Meta Humans™ Security Declaration

At Meta Humans™, data security is our highest priority, particularly within sensitive sectors such as finance, healthcare, and government. We rigorously ensure the protection of customer data by adhering to a comprehensive set of regulatory standards, including the Protection of Personal Information (POPI) Act, General Data Protection Regulation (GDPR), Health Insurance Portability and Accountability Act (HIPAA), Service Organization Control 2 (SOC 2), and other relevant compliance frameworks.

Our commitment to security is matched by our dedication to continuous innovation. We actively incorporate customer feedback, regularly update and enhance our AI software platform and Meta Humans™ digital assistants, and remain vigilant in adopting emerging technologies and industry best practices.

We firmly believe that responsible AI adoption can drive transformative positive change, unlock new opportunities, and address global challenges. To uphold this vision, Meta Humans™ strictly complies with all applicable data protection regulations to safeguard personal information.

A fundamental principle of our security approach is that no information is ever stored unencrypted. Access to data is strictly compartmentalized—no individual within the company can access another user's information, whether in databases, storage systems, or communications. Our biometric login system stores only usernames: all other data is encrypted end-to-end.

Upon deployment of our banking system, we will fully implement and comply with Financial Intelligence Centre Act (FICA) regulations. However, we will ensure that all personal information collected for verification purposes is securely destroyed immediately after successful validation. The company will not retain any personal data beyond this point. In the event of legal claims involving a user, Meta Humans™ will be unable to act on behalf of any party, as we do not have access to personal information. Users are solely responsible for their own actions, and we explicitly state that we are not law enforcement nor obligated to police user behaviour. This responsibility extends equally to all users.

To protect minors, individuals under the age of 18 are prohibited from joining our platform. Age verification is enforced through multiple mechanisms, including device identification, payment card verification, and behavioural analysis. If underage use is suspected, the system will require additional verification such as photo ID, movement analysis, fingerprint recognition, and voice identification. Our advanced vision systems enable comprehensive facial analysis, capable of interpreting visual and auditory biometric data to ensure compliance.

Furthermore, we continuously evaluate and implement additional safeguards to prevent misuse of our platform and to protect all users from activities that could cause harm.

Meta Humans™ remains steadfast in our commitment to privacy, security, and ethical AI deployment, ensuring a safe and trustworthy environment for all users.

Ongoing Improvement and Innovation:

Meta Humans are dedicated to continuous improvement and innovation in their AI software platform and Meta Human digital assistants.

Partners & Resources

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

Partnership Status and Strategic Direction:

At this stage, all previous partnerships have been invalidated and formally cancelled. This decision reflects that Meta Humans™ now fully owns or holds the necessary licenses for all software, tools, technologies, deployments, development, coding, and encryption used within our environment—including all open-source code integrated into our operating systems.

We have also concluded all partnerships with enterprise companies. This is due to the comprehensive incorporation of proprietary methods and the significant shifts in how we develop and deliver our services moving forward. Historically, contracting with enterprise clients could take over two years to finalize, consuming valuable time and resources with limited returns. Corporate environments tend to be slow-moving and bureaucratic, unable to keep pace with the rapid evolution and relentless innovation of our technologies.

Nonetheless, corporate entities and businesses of all sizes can still leverage our LoRA deployments, which effectively address the challenges of adapting to fast-changing AI ecosystems.

Currently, Meta Humans™ maintains only two active partnerships: our hosting providers and banking infrastructure partners. These relationships will continue until such time as the company opts to host its own servers—though this is not recommended at present, as we retain full administrative control over our current infrastructure.

Regarding banking infrastructure, it is unlikely this will change. The providers and underwriters involved do not participate in the company's financial or ethical decision-making. Moreover, due to stringent compliance and regulatory requirements, it is neither financially viable nor strategically advisable for Meta Humans™ to own its financial infrastructure.

Opportunity

The vision:

Human interaction at an infinite scale®. Meta Humans™ will become the bridge between human and machine. It enables everyone to become essentially immortal.

2001 > 2015

Our founders have been combining their knowledge and expertise to explore various methods of implementing communication on websites, including chat apps and chat buddies. Our vision since 2001 has been focused on deploying the Glass Era technology provided by Corning Glass. We aimed to create usable, bendable, unbreakable portable glass with interfaces and the ability to connect to devices. In 2015, we introduced Live Persons, also known as Digital Personas, which utilized pre-recorded human expressions and faces. DeepBrain adopted the use of video recordings, and many others followed suit.

2015 > 2022

However, by late 2017, we realized that none of these methods were truly effective because we lacked intelligent real-time communication without limitations. While the earliest successful AI program was written in 1951 by Christopher Strachey, it wasn't until the 20th century that AI began to explode, and since 2018, it has become a workable concept.

In 2021, we implemented the Chat Bot system called the Instant Web Bot Platform. However, we soon realized that it didn't work in the way we desired. This led us to search for better, more humane interaction. Finally, in 2022, we were able to combine several technologies and companies to introduce Metas or Digital Persons. Since June 2022, we have partnered with three companies and can now provide Meta Humans, which are integrated with the Meta Creator Platforms and Chat Bot systems, creating a functional system.

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

2022 > 2025

Starting from March 2025, we were able to deploy Meta Humans to work with the Glass Technology as originally intended in 2013. Additionally, we will incorporate our own Human operating system (HumanOS) into Corning Technology, enabling us to utilize the glass technology across various devices, just as we envisioned in 2013.

2025 and beyond >

Since the beginning of 2025, the complete incorporation of the business has been redesigned from the start. And today March 27, marks an incredible flagship moment in history, where we enabled technology in the correct sense, to create something that is absolutely staggering and marks a way of communication that will change the future forever. What you saw in movies has now become reality and is no longer guesswork. What is achieved with the help of artificial intelligence, existing software solutions, open-source software, and many other contributors mark an era of our company's independence from third party providers, API integrations and reliance on other companies.

Meta Humans™ has no debt, other than its shareholders who own equity in the company and for whom financial wealth tools was created to ensure that their patience and help over the past 25 years of research and rebuilding is rewarded, as their support made it all possible.

Our software can outgrow and outpace itself, with the systems in place, and the ideation of the tools implemented, which we now have achieved where many others have given up.

We are Meta Humans™, Human interaction at infinite scale®.

Company

Overview

The Business:

The company Meta Humans LTD, a C-Corporation, incorporated in Delaware:

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

Name: Meta Humans LTD
Date of formation: September 29, 2022,
Delaware State File Number: 7057856
HBS Record ID Number: 518375
EIN Number: 35-2774175

Certificate of good standing: Issued

The official address for the Meta Humans LTD company:
Delaware: 16192 Coastal Highway, Lewes, Delaware, 19958, County of Sussex, Pennsylvania, United States of America.

South Africa: 1st street, Fairview Gardens, Eastern Extension, George, South Africa, 6529

UK: To confirm

Meta Humans LTD, located in Delaware, Lewes, is an innovative Artificial Intelligence Company that operates globally. Our mission is to revolutionize the way people operate by offering cutting-edge AI-based solutions.

Intellectual Property Rights:

Securing intellectual property rights is crucial for us to maintain a competitive edge and protect our innovations. We aim to acquire intellectual property through joint ventures with both partners and competitors.

- Meta Humans recognize the importance of securing the intellectual property rights of their deployed platforms.
- This is done to maintain a competitive edge and protect our innovations.
- We already secured the patent rights on our slogan and logo. We are awaiting the name Meta Humans to be approved.

IMPORTANT ASPECTS TO THIS BUSINESS PLAN:

CONTINUOUS UPDATES: A plan is never fixed; it evolves and adapts as the business grows. Our business model is intentionally designed to be infinite, focusing on long-term innovation rather than short-term competition. We don't get distracted by competitors or their tactics. Our mindset mirrors the Apple vs. Microsoft dynamic—Apple embodies the infinite business vision, while Microsoft often targets immediate gains. To deepen your understanding of this approach, we recommend watching this insightful video: [Learn about infinite business practice](#). Our team follows this business process.

We want to emphasize that we don't see other companies as competitors, they often accelerate the advancement of our technology. Even giants like Google depend on thousands of companies to deliver

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

exceptional products and services to their users. To see just how many companies track you on Google, simply open Google Chrome and enter this code: [Tracking companies working for Google](#).

FACT SHEET:

We currently utilize multiple CPU and GPU servers to deploy large language models (LLMs) such as Kimi, GLM, Qwen, and others. While we host these models on our own servers, the underlying technology is not ours. Instead, we leverage these libraries to build the intellectual engines behind our Meta Humans Personas, designed to enhance human reasoning, thinking, decision-making, and intelligence—ultimately helping us create a new superhuman race.

Importantly, we do not feed these LLMs directly. Each user operates within containerized, isolated frameworks that develop their own intellect using the libraries, brains, and orchestrators we have deployed.

Ownership & Structure:

The equity structure is as follows:

50 000 authorized preference shares and 50 000 authorized ordinary shares, that is digital shares under the Delaware Law. Each share has 400 fractionized equity coins that is \$15 each. A share is \$6000 per share. All shares are issued.

The major founder shareholders will create a loan account to the company to fund the company's planned expenses which are the expansion of the GPU servers for capacity and the implementation of the banking system. For this reason, we require \$2 million, of which \$600 000 is for the implementation of the banking system.

There is also a deployment for the culture coin of Meta Humans™ that will be implemented by end of April 2026.

Get involved:

Investors are increasingly drawn to the expanding power of artificial intelligence, with Meta Humans™ LTD positioned as an AI technology platform dedicated to developing cutting-edge AI tools for public use.

Investing in our company allows you to be at the forefront of innovative AI advancements and contribute to the creation of groundbreaking solutions that tackle real-world challenges.

Early investment in our AI technology presents significant potential for increased value as these solutions gain wider adoption. Moreover, investors gain exclusive access to our team of expert technologists who are pioneers in machine learning and AI development. This access ensures that you are kept informed about the latest advancements in AI technology. Additionally, Meta Humans™ LTD offers valuable resources for businesses looking to implement their own AI-driven solutions, assisting them in overcoming previously insurmountable obstacles.

Have a conversation with our Meta Human™ and immerse yourself in a one-of-a-kind experience engaging with cutting-edge artificial intelligence. The emergence of human-like AI is not a passing trend, but a permanent fixture in our society. Now is the time to seize the opportunity.

Technological advancements have allowed chatbots such as Siri and Alexa to interact with humans not only through their voices, but also through lifelike facial expressions. In the realm of AI programming, creating a system that can engage in diverse conversations, exhibit empathy, and display human-like facial expressions is a significant achievement.

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

Visit [Meta Humans](#) to embark on an immersive encounter with Meta Humans™ live and experience some of the technological benchmarks.

As an investor, you now have the chance to join us before Meta Humans™ expands rapidly into the market.

Pitch

The pitch contains elements of the teams and summaries. Our more expansive previous business plans with financials are available on request.

ABOUT META HUMANS

Offer an "in person" channel that's always on (24/7, 365 days a year), always consistent and always on brand.

Development of the AI Ecosystem

Development of AI Ecosystem:

Meta Humans™ could contribute to the development of the AI ecosystem by hosting developer forums, arranging hackathons or meetups, and promoting collaboration and knowledge sharing among ecosystem participants.

Ethical Use of AI

The significance of ethical considerations in creating and implementing AI solutions, encompassing transparency, fairness, and accountability. Which ethical guidelines or principles are adhered to, along with endeavors to reduce bias and ensure the responsible use of AI. We are registered to various platforms like the South African artificial intelligence association, Responsible Artificial Intelligence Institute and GPAI (Global Partnership on Artificial Intelligence).

Financials

CONFIDENTIAL - DO NOT DISSEMINATE. This business plan contains information that is meant for the recipient only and is shared with the understanding that you will treat its contents or ideas with respect and do not share the information with third parties without the express written consent of Meta Humans LTD internationally.

Financial forecasts are not attached

Meta Humans™ currently operates with a comprehensive automated billing system that is integrated with Xero accounting systems, the payment gateway Stripe and Brex and updates in seconds. The billing platform ensures timely issuing of invoices and updates to payments. These systems ensure that shareholders and directors can monitor and access financial statistics in real time without the need to wait for audited statements.

Take notice that both the billing and accounting systems will be replaced completely by end of 2026 as Meta Humans™ will develop our own accounting systems within our banking platform.
